The table below provides a summary of the Actuarially
Determined Employer Contribution (ADEC) for FYE June 30, 2020 and 2019.

| Contributions for Fiscal Year Ending | June 30, 2020 | June 30, 2019 |
| :--- | :---: | :---: |
| Actuarially Determined Employer Contribution |  |  |
| Normal Cost | $\$$ | $1,077,295$ |
| Accrued Liability | $\$$ |  |
| Total | $\$$ | 021,347 |
| Liquidation Period | N/A* | $\$$ |

*If the actuarially determined employer contribution (ADEC) is based on 12 year amortization of the unfunded accrued liability, the ADEC is less than \$0, which is not a permissible result. Therefore, the accrued liability contribution has been set such that the total employer ADEC equals $\$ 0$.

## Certification

Future actuarial measurements may differ significantly from current measurements due to plan experience differing from that anticipated by the economic and demographic assumptions, increases or decreases expected as part of the natural operation of the methodology used for these measurements, and changes in plan provisions or applicable law. Because of limited scope, Cavanaugh Macdonald performed no analysis of the potential range of such future differences, except for some limited analysis in financial projections or required disclosure information. Results prior to December 31, 2017 were provided by the prior consulting actuary.

We meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained in this report. This report has been prepared in accordance with all applicable Actuarial Standards of Practice, and we are available to answer questions about it.

## Members of the Board:

We submit herewith our report on the actuarial valuation of the Registers of Deeds' Supplemental Pension Fund (referred to as RODSPF or "the Fund"), prepared as of December 31, 2017. The report has been prepared in accordance with North Carolina General Statute 161-50. Information contained in our report for plan years prior to December 31, 2017 is based upon valuations performed by the prior actuary.

The primary purpose of the valuation report is to determine the required employer contribution rates, to describe the current financial condition of the Fund, and to analyze changes in such condition. In addition, the report provides information that the Office of the State Controller (OSC) requires for its Comprehensive Annual Financial Report (CAFR) and it summarizes census data. Use of this report for any other purposes or by anyone other than OSC and its auditors, or North Carolina Retirement Systems Division and Department of State Treasurer Staff may not be appropriate and may result in mistaken conclusions because of failure to understand applicable assumptions, methods, or inapplicability of the report for that purpose. The attached pages should not be provided without a copy of this cover letter. Because of the risk of misinterpretation of actuarial results, you should ask Cavanaugh Macdonald Consulting (CMC) to review any statement you wish to make on the results contained in this report. CMC will not accept any liability for any such statement made without prior review.
The valuation is based upon membership data and financial information as furnished by the Retirement Systems Division and the Financial Operations Division and as summarized in this report. Although reviewed for reasonableness and consistency with the prior valuation, these elements have not been audited by CMC and we cannot certify as to the accuracy and completeness of the data supplied. Sometimes assumptions are made by CMC to interpret membership data that is imperfect. The valuation is also based on benefit and contribution provisions as presented in this report. If you have reason to believe that the plan provisions are incorrectly described, that important plan provisions relevant to this valuation are not described, or that conditions have changed since the calculations were made, you should contact the authors of this actuarial report prior to relying on this information.

The valuation is further based on the actuarial valuation assumptions, approved by the Board of Trustees, as presented in this report. We believe that these assumptions are appropriate and reasonable and also comply with the requirements of GASB Statement No. 67. We prepared this valuation in accordance with the requirements of this standard and in accordance with all applicable ASOPs.

The latest assumptions were adopted for use beginning with the December 31, 2015 actuarial valuation, based on the experience study prepared as of December 31, 2014 and adopted by the Board of Trustees on April 21, 2016. The economic assumptions with respect to investment yield, salary increase and inflation have been based upon a review of the existing portfolio structure as well as recent and anticipated experience.

Where presented, references to "funded ratio" and "unfunded accrued liability" typically are measured on an actuarial value of assets basis. It should be noted that the same measurements using market value of assets would result in different funded ratios and unfunded accrued liabilities. Moreover, the funded ratio presented is appropriate for evaluating the need and level of future contributions but makes no assessment regarding the funded status of the plan if the plan were to settle (i.e. purchase annuities) for a portion or all of its liabilities. In various places in the report the results also show funded ratios and unfunded liabilities based upon varying sets of assumptions as well as market values of assets as that is required for certain disclosure information required per accounting rules or statutes. Where this has been done it has been clearly indicated.
Future actuarial results may differ significantly from the current results presented in this report due to such factors as the following: fund experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; and changes in plan provisions or applicable law. Such changes in law may include additional costs resulting from future legislated benefit improvements or cost-of-living pension increases or supplements, which are not anticipated in the actuarial valuation. Because of limited scope, CMC performed no analysis of the potential range of such future differences, except for some limited analysis in financial projections or required disclosure information.
We meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained in this report. This report has been prepared in accordance with all applicable Actuarial Standards of Practice, and we are available to answer questions about it.

Sincerely,

Larry Langer, ASA, EA, FCA, MAAA
Principal and Consulting Actuary

## Section 1: Summary of Principal Results

1. This report, prepared as of December 31, 2017, presents the results of the actuarial valuation of the system. For convenience of reference, the principal results of the valuation and a comparison with the results of the previous valuation are summarized below.

Table 1: Summary of Principal Results

* If the actuarially determined employer contribution (ADEC) is based on 12 year amortization of the unfunded accrued liability, the ADEC is less than $\$ 0$, which is not a permissible result. Therefore, the accrued liability contribution has been set such that the total employer ADEC equals $\$ 0$.
** As of the valuation date, there were 100 members serving as registers of deeds. One former register of deeds is an active employee in the Local Governmental Employees' Retirement System (LGERS) and consequently ineligible to receive a benefit from the RODSPF until retirement from LGERS.
*** Reported compensation adjusted to reflect the assumed rate of pay increase prior to the valuation date.
**** The Funded Ratio on a Market Value of Assets basis is 158.5\% at December 31, 2017.

## Section 4: Comments on Valuation

Appendix A of this report presents a summary of the results of the valuation, including present and prospective assets and liabilities of the Fund as of December 31, 2017.

The results of the valuation show that the Fund has total prospective liabilities of $\$ 38,157,063$ of which $\$ 21,995,470$ is for the prospective benefits payable on account of retired members currently receiving benefits and $\$ 16,161,593$ is for the prospective benefits payable on account of present active members. From these liabilities subtracting the present value of future normal cost contributions of $\$ 7,305,910$, leaves $\$ 30,851,153$ as the actuarial accrued liability (AAL). The Fund has present assets of $\$ 49,431,313$ resulting in an unfunded actuarial accrued liability (UAAL) equal to $\$(18,580,160)$.
The valuation indicates that employer normal cost for the year totals $\$ 1,077,295$, which is the annual cost of benefits accruing in the current year under the actuarial funding method, and also includes the amount required for administrative expenses. The payment required to amortize the UAAL is $\$(1,077,295)$, resulting in an actuarially determined contribution of \$0 for fiscal year ending June 30, 2020.

## Section 5: Comments on Experience and Gains/Losses

The following table shows a detailed reconciliation of the change in unfunded accrued liability since the prior valuation.

# Table 5: Reconciliation of Change in Unfunded Accrued Liability Since the Prior Valuation 

(in millions)

|  |  |
| :--- | ---: |
| Unfunded Actuarial Accrued Liability as of $12 / 31 / 2016$ | $(17.2)$ |
| Change due to Transition to New Actuary | $(1.2)$ |
| Unfunded Actuarial Accrued Liability as of $12 / 31 / 2016$ after Transition | $(18.4)$ |
| Normal Cost during 2017 (Including Admin Expenses) | 1.0 |
| Reduction due to Actual Contributions during 2017 | $(0.8)$ |
| Interest of UAAL, Normal Cost, and Contributions | $(0.7)$ |
| Asset (Gain) / Loss | 0.3 |
| Actuarial Accrued Liability (Gain) / Loss | - |
| Impact of Assumption Changes |  |
| Unfunded Actuarial Accrued Liability as of $12 / 31 / 2017$ |  |

Commentary: During 2017, there was a transition from the prior actuary to CMC, resulting in valuation programing, modifications and differences in methodologies, such as payroll increase timing, that decreased the UAAL by $\$ 1.2$ million. In addition, asset loss during the year increased the UAAL by $\$ 0.3$ million.

## Section 6: Accounting Information

The section contains the accounting information for Governmental Accounting Standards Board (GASB) Statement No. 67 for fiscal year ending June 30, 2018 based on a valuation date of December 31, 2017.

Please note GASB Statement No. 67 (Financial Reporting for Pension Plans) is applicable for fiscal years ending 2014 and later.

The June 30, 2018 total pension liability presented in this section was determined by an actuarial valuation as of December 31, 2017, based on the assumptions, methods and plan provisions described in this report. The actuarial cost method used to develop the total pension liability is the Entry Age Normal Cost method, as required by GASB Statement No. 67.

GASB Statement No. 67 set forth certain items of information to be disclosed in the financial statements of the Plan. The tables below provide a distribution of the number of employees by type of membership.

Table 6: Number of Active and Retired Participants as of December 31, 2017

| Group | Number |

| Terminated members and survivors of deceased <br> members entitled to benefits but not year <br> receiving benefits | 0 |
| Active Participants <br> Total | 201 |

## Section 6: Accounting Information

GASB Statement No. 67 set forth certain items of information to be disclosed in the financial statements of the Plan. The tables below provide the schedule of changes in Net Pension Liability (Asset).

| Plan Fiduciary Net Position as a Percentage of the Total Pension Liability | 153.31\% |  | 153.77\% |

## Section 6: Accounting Information

The table below is the sensitivity of the net pension liability to changes in the discount rate.

## Table 9: Sensitivity of the Net Pension Liability (Asset) at June 30, 2018 to Changes in the Discount Rate

|  | 1\% Decrease | Current | 1\% Increase |
| :---: | :---: | :---: | :---: |
| Discount Rate | $2.75 \%$ | $3.75 \%$ <br> Net Pension Liability (Asset) | $4.75 \%$ <br> $(13,059,000)$ |
| $(16,563,000)$ | $(19,518,000)$ |  |  |

The discount rate used to measure the total pension liability was $3.75 \%$. The projection of cash flows used to determine the discount rate assumed that System contributions will continue to follow the current funding policy. Based on those assumptions, the System's fiduciary net position was projected to be available to make all projected future benefit payments of current plan members. Please see Appendix E for additional detail.

The table below provides the methods and assumptions used to calculate the actuarially determined contribution rate.

* If the actuarially determined employer contribution (ADEC) is based on 12 year amortization of the unfunded accrued liability, the ADEC is less than $\$ 0$, which is not a permissible result. Therefore, the accrued liability contribution has been set such that the total employer ADEC equals $\$ 0$.

## Appendix B: Development of Actuarial Value of Assets

| Asset Data as of | December 31, 2017 |  |
| :---: | :---: | :---: |
| Beginning of Year Market Value of Assets | \$ | 48,233,622 |
| Contributions |  | 844,228 |
| Benefit Payments | \$ | $(1,806,150)$ |
| Net Cash Flow | \$ | $(961,922)$ |
| Expected Investment Return | \$ | 1,790,891 |
| Expected End of Year Market Value of Assets | \$ | 49,062,591 |
| End of Year Market Value of Assets | \$ | 48,913,662 |
| Excess of Market Value Over Expected Market Value | \$ | $(148,929)$ |
| 80\% of 2017 Asset Gain/(Loss) | \$ | $(119,143)$ |
| 60\% of 2016 Asset Gain/(Loss) |  | 265,444 |
| 40\% of 2015 Asset Gain/(Loss) |  | $(663,952)$ |
| 20\% of 2014 Asset Gain/(Loss) |  | N/A |
| Total Deferred Asset Gain/(Loss) | \$ | $(517,651)$ |
| Preliminary End of Year Actuarial Value of Assets | \$ | 49,431,313 |
| Final End of Year Actuarial Value of Assets (not less than $80 \%$ and not greater than $120 \%$ of Market Value) | \$ | 49,431,313 |
| Estimated Net Investment Return on Actuarial Value |  | 3.14\% |
| Estimated Net Investment Return on Market Value |  | 3.44\% |

Commentary: The actuarial value of assets smooths investment gains/losses resulting in less volatility in the employer contribution. The asset valuation method recognizes asset returns in excess of or less than the expected return on the market value of assets over a five-year period.

The continued deferral of losses resulted in an actuarial value of asset return for calendar year 2017 of $3.14 \%$ and a recognized actuarial asset loss of \$297,000 during 2017.

## Appendix C: Actuarial Assumptions and Methods

Assumptions are based on the experience investigation prepared as of December 31, 2014 and adopted by the Board of Trustees on April 21, 2016 for use beginning with the December 31, 2015 annual actuarial valuation.

Interest Rate: $3.75 \%$ per annum, compounded annually.
Inflation: Both general and wage inflation are assumed to be $3.00 \%$ per annum.
Real Wage Growth: $0.50 \%$ per annum.
Separations From Active Service: Representative values of the assumed rates of separation from active service are as follows:

## Appendix C: Actuarial Assumptions and Methods

Deaths After Retirement: Representative values of the assumed post-retirement mortality rates as of 2014 prior to any mortality improvements are as follows:

Annual Rate of Death after Retirement

|  | Retirees <br> (Healthy at Retirement) |  |  | Retirees <br> (Disabled at Retirement) |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

| 80 | .0604 | .0404 | .0789 | .0604 |  |

Deaths After Retirement (Healthy Members at Retirement): Mortality rates are based on the RP-2014 Total Data Set for Healthy Annuitants Mortality Table. Rates for male members are multiplied by $115 \%$ for ages $50-78$ and by $135 \%$ for ages greater than 78 . Rates for female members are multiplied by $79 \%$ for ages $50-78$ and by $116 \%$ for ages greater than 78 . The RP- 2014 annuitant tables have no rates prior to age 50. The RP-2014 Total Data Set Employee Mortality Table (with no adjustments) is used for ages less than 50 .

Death After Retirement (Disabled Members at Retirement): Mortality rates are based on the RP-2014 Total Data Set for Disabled Annuitants Mortality Table. Rates for male members are multiplied by $103 \%$ for all ages. Rates for female members are multiplied by $99 \%$ for all ages.

Deaths Prior to Retirement: Mortality rates are based on the RP-2014 Total Data Set Employee Mortality Table.

Mortality Projection (Non-Disabled): All mortality rates are projected from 2014 using generational improvement with Scale MP-2015.

Timing of Assumptions: All withdrawals, deaths, disabilities, retirements and salary increases are assumed to occur July 1 of each year.

Administrative Expenses: Assumed to be $0.15 \%$ of the market value of assets at the beginning of each calendar year.

Reported Compensation: Calendar year compensation as furnished by the system's office.
Valuation Compensation: Reported compensation adjusted to reflect the assumed rate of pay as of the valuation date.

Actuarial Cost Method: Entry age normal cost method.
Normal Cost: Normal cost rate reflects the impact of new entrants during the year.

## Appendix C: Actuarial Assumptions and Methods

Asset Valuation Method: Actuarial value, as developed in Appendix B. The actuarial value of assets is based upon a smoothed market value method. Under this method, asset returns in excess of or less than the expected return on market value of assets will be reflected in the actuarial value of assets over a fiveyear period. The calculation of the Actuarial Value of Assets is based on the following formula:

MV - 80\% $\times \mathrm{G} /(\mathrm{L})_{1}-60 \% \times \mathrm{G} /(\mathrm{L})_{2}-40 \% \times \mathrm{G} /(\mathrm{L})_{3}-20 \% \times \mathrm{G} /(\mathrm{L})_{4}$
$M V=$ the market value of assets as of the valuation date
$\mathrm{G} /(\mathrm{L})_{i}=$ the asset gain or (loss) for the i -th year preceding the valuation date
Changes Since Prior Valuation: None.

## Appendix D: Summary of Main Plan Provisions

The Registers of Deeds' Supplemental Pension Fund was established October 1, 1987 for all county registers of deeds who are retired from the Local Governmental Employees' Retirement System or an equivalent locally sponsored plan.

## Benefits

Service Retirement Pension
Conditions for Pension

Amount of Pension For Registers of Deeds who began service before September

10, 2009, the benefit payable for the life of the member only, equal to $75 \%$ of the equivalent annual salary immediately preceding retirement computed on the latest monthly base rate. Maximum benefit is $\$ 1,500$ per month.

For Registers of Deeds who began service September 10, 2009 or later, the benefit is minimum of $(A, B)$ :
$A=75 \%$ of equivalent annual salary immediately preceding retirement computed on the latest monthly base rate (minus maximum pension from LGERS or equivalent locally sponsored plan).

$$
B=\$ 1,500 .
$$

Note: For valuation purposes, all members are valued under the pre-2009 provisions due to the immateriality of the difference in benefits
Retirement from the Local Governmental Employees' Retirement System or equivalent locally sponsored plan with 10 or more years of service as a register of deeds.
or

Deferred Vested Retirement Pension

Conditions for Pension

Amount of Pension

Separation from service after completing at least 10 years of service as a register of deeds.
